Attn: Mr. Lynn Clark

Dear Sir:

Please be advised that the City of Solon's Central Wastewater Treatment Plant, 6951 Cochran Road, produces about 3/4 yards per day of screenings; 1/2 yards per day of grit; and 2 1/2 yards per day of grease. The solids handling equipment is not yet on line, however, it is expected to produce about 16 yards per day of vacuum filtered sludge at approximately 30% solids.

Presently, the above screenings, grit, and grease are disposed of at Glenwillow Land Fill. It is respectfully requested that you grant permission to the City of Solon to take these substances in the approximate quantities mentioned above and the vacuum filter sludge when production of it starts, to Inland Reclamation Land Fill.

It would be possible to take these loads at prescribed times of the day, i.e. early morning to facilitate complete coverage with other rubbish received by the land fill.

Your prompt attention to this matter would be most appreciated.

Should you have any questions or require more information, please call me.

Very truly yours,

Richard D. Roberts, Superintendent
Wastewater Pollution Control Department
248-1155
